Professional Summary

Backend Software Engineer with 1+ year of experience building production backend systems, distributed microservices and AI-powered enterprise applications. Experienced in Java, Spring Boot, Kafka, Docker, Kubernetes, Linux, REST/SOAP APIs and cloud-native development. Worked on Nokia Converged Charging (NCC), production debugging, regression fixes, LLM-powered configuration services, streaming APIs, Java concurrency and QA support.

Technical Skills

Languages: Java, Python, SQL, C++, JavaScript

Backend: Spring Boot, Spring MVC, FastAPI, Flask, REST, SOAP, Microservices

AI: LLMs, Prompt Engineering, RAG, OpenAI APIs, Streaming APIs

Databases: PostgreSQL, MySQL, MongoDB

Messaging: Kafka

DevOps: Docker, Kubernetes, Linux, Git

Software Engineering: SOLID Principles, Design Patterns

Experience

Backend Developer – Exalt Technologies (Client: Nokia)

Jul 2025 – Present

- Developed and maintained Java/Spring Boot microservices for Nokia Converged Charging (NCC).
 - Designed, debugged and tested production backend services in distributed cloud-native environments.
 - Built AI-assisted telecom configuration services using LLMs, prompts, execution plans and tool orchestration.
 - Developed secure streaming APIs that filtered internal reasoning, agent/tool names and exposed only safe responses.
 - Worked daily with Docker, Kubernetes and Linux for deployments, debugging and production support.
 - Integrated Kafka-based asynchronous communication.
 - Investigated production regressions, fixed defects and collaborated closely with QA for release validation.
 - Resolved a critical dependency conflict that had blocked a production microservice for weeks, restoring deployment.
 - Strengthened expertise in Java multithreading, concurrency and Spring Boot while debugging production systems.
 - Developed REST/SOAP integrations and collaborated with multiple engineering teams.
-

Projects

Enterprise AI Agent Platform

- Contributed to a cross-team enterprise AI platform by developing backend services and AI agent integrations.
 - Built FastAPI-based backend APIs and implemented tools enabling AI agents to securely persist and retrieve data from databases.
 - Designed clean, maintainable backend components following SOLID principles and the Repository Pattern.
 - Integrated with LLM-powered services supporting RAG workflows, tool execution and streaming inference APIs.
 - Worked with Docker and Kubernetes during development and deployment.
-

Education

National Institute of Technology Srinagar

B.Tech Computer Science and Engineering

2021–2025

CGPA: 8.219/10
